

***Added value for mobile machines: WIKAI Mobile Control exhibits at this year's bauma together with WIKAI.***

**Munich/Ettlingen (Germany). Sometimes, the whole is greater than the sum of its parts. At this year's bauma, visitors can find WIKAI Mobile Control together with WIKAI – the technology expert in pressure and force measurement. Together, the WIKAI Group creates added value for mobile machines!**

WIKAI Mobile Control makes lifting loads safer! As an experienced specialist, WIKAI Mobile Control has spent many years providing reliable safety solutions for lifting loads. The Ettlingen-based company continues to set innovative standards and ensures dependable communication between machines and their operators in harsh environments.

**Customer-specific applications? No problem!**

By developing robust sensors, mobile controllers and application software, WIKAI Mobile Control ensures that customers benefit from maximum safety and equipment uptime. As a system integrator, WIKAI Mobile Control offers customers comprehensive support through all project phases: from analysis and concept evaluation, through system design and project planning to prototype testing and field launches. The safety expert supports certification processes and is available for seamless life cycle management. This keeps the trueSafety standard for maximum safety always in focus and enables WIKAI Mobile Control to provide customers with the solutions they need – from standard to customized systems.

**Value-added systems need reliable components**

Mud, dust, salt water or extreme temperatures – applications for mobile machines must be prepared for rough environments. At booth 226 in hall A2, bauma visitors can discover the certified safety controllers of the CTL-S700 series, which are ideally suited for this purpose thanks to its IP66/67 protection class. Available in four different versions, these cost-effective controllers offer safety at the highest level!

WIKAI Mobile Control will also present the new user-friendly vSCALE E series consoles. vSCALE E2 and vSCALE E3 can be used to display service reports, error reports, and statistical entry of data for work processes. WIKAI Mobile Control offers machine manufacturers innovative operating concepts and individual application development – tailored specifically to the customer's needs.

A comprehensive portfolio of measurement technology for pressure, geometry, force, level and temperature completes the presented product catalogue from which producers of mobile machinery can build individual systems. Whether it is the high precision of OEM pressure sensor MH-4, reliable operational readiness of the inclination sensor gSENS TLT-C or the durable robustness of the WIKAI force sensor technology: the WIKAI

## PRESS RELEASE

Group presents high-quality components that enable safe, productive and efficient work with mobile machines on construction sites around the world.

### **Combining competencies in the WIKA Group facilitates added value**

As part of the WIKA Group since 2018, WIKA Mobile Control joins the ranks with WIKA, an expert in the field of force and pressure measurement. At booth 226 in hall A2, the experts of the WIKA Group will meet to offer customers even more safety when dealing with mobile machines. The focus here is on the added value that WIKA brings to mobile machine manufacturers: high safety, a plus in productivity, powerful robustness, growing economic efficiency, reliable machine availability, customer-specific individuality and the greatest security of supply.
